- Review of the requirements for Registrar Contract II effective from **1 July 2027**
- Next steps
- Questions

Who is in the room from Punktum dk?

Elin Smeby
Relationship
Manager

Mathias Baltzen
Customer service
consultant

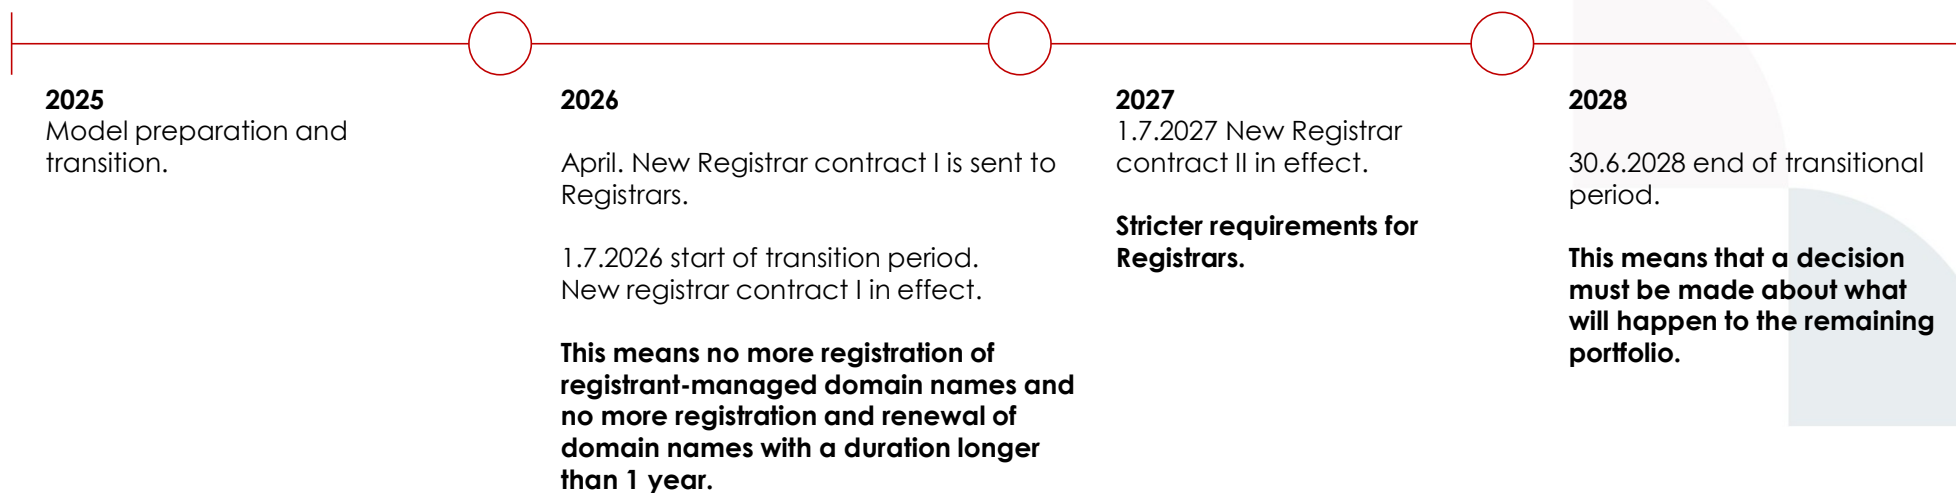

Nikolaj Hansen
Senior Solutions
Architech

Laila S. Jensen
Head of Legal

Macro timeline

Changes in Registrar contract I

Technical changes

Technical changes as of July 1, 2026

Only 1-year registration period for new domain registrations and renewals

- Registration periods of 2–10 years will longer be available
- Domain names can be renewed with 2 months left until expiration
- Existing multi-year registrations will be converted to 1-year registrations, while the current expiration date remains unchanged

Registrar handling only

- For new domain registration and new contacts created in EPP or the registrar portal
- Withdrawal of registrar handling will no longer be supported
- Registrant handling to be completely phased out by July 1st, 2028

VID (Very Important Domain) service is discontinued

- Sign-up feature removed from registrant self-service portal February 25th, 2026
- Existing VID service subscriptions will remain active for now
- Standardized registry lock model as replacement for VID under consideration

Technical changes as of July 1, 2026 (cont'd)

- 60% of .dk domains are still registrant managed
- We would like to help registrants initiate transfer in a simple and fast process

Fast Track Domain Transfer

- Opt-in server-to-server feature for registrars
- Registrar defines within the registrar portal settings if feature is offered
- Registrant selects the registrar in registry 's self-service portal
- Upon explicit consent by registrant, a short lived auth token is generated by registry and securely transferred to the registrar allowing the transfer flow to start on the registrar 's side
- If the server-to-server model is not offered, fallback is standard workflow (registrant manually provides the token to the registrar)
- Final technical specification to be published no later than April 1st, 2026
- Punktum dk development currently planned to be completed no later that May 5th, 2026
- Initial draft available for review at <https://github.com/Punktum-dk/fast-track-transfer-specification>

Requirements in Registrar contract II

Next steps – 1st half of 2026
